notes The product is completely biodegradable. Special runs available upon request.

The Company reserves the right to modify the technological features of the product in relation to market requirements.

Splendorlux Label has been specially developed for the labels sector. The particular wet-strength treatment makes this paper ideal for a wide variety of applications in bottling when returnable/recyclable bottles are used.

applications

For labelling, always observe the correct indications as regards grain direction. It must be parallel to the base of the bottle (see drawings).

The like mirror-finish surface of Splendorlux Label ensures particularly bright printing results with excellent contrast, detail and color saturation. Can be used without problems with the main printing systems: letterpress, offset, blind embossing, hot foil stamping, thermography, screen printing and bronzing. The macro-porous surface requires the use of oxidative drying inks; also control the fountain solution in terms of both pH and conductivity and/or additives to keep emulsions to minimal levels. For better setting and dry control, we advise against excessive ink loads and recommends the use of anti-setoff spray powder and ink drying additives if necessary. For recto/verso printing, it is advisable to print the uncoated side first.

printing suggestions

Splendorlux Label ensures excellent results in conventional or UV varnishing. Excellent results are also achieved with plastic lamination.

converting suggestions

There are no particular problems for all converting operations.
